IVF SUCCESS RATES

Fresh Non Donor Eggs 2007				
Fresh Embryos From Non Donor Eggs	Age of Woman (Years)			
	<35	35-37	38-40	>40
Cycles Initiated	48	42	24	7
Egg Retrievals	47	38	22	7
Transfers	43	37	19	7
+ Bhcg ¹ /ET	78%	54%	68%	1/7
Clinical Pregnancy Rate ² / ET	67%	46%	42%	1/7
Live Births/ET	58%	35%	37%	1/7
Percentage pregnancies with twins	24%	41%	13%	0
Percentage pregnancies with triplets	3%	0	1/8	0
Percentage live births with multiples	28%	31%	13%	0
Average # embryos transferred	2.3	2.8	3.1	3.4
Cancellation Rate ³	6%	9%	14%	0

Frozen Embryos Non Donor Eggs 2006-2007			
Frozen Embryos From Non Donor Eggs	Age of Woman (Years)		
	<35	35-37	38-40
Transfers	10	9	5
+ Bhcg ¹ /ET	9/10 (90%)	8/9 (88%)	3/5 (60%)
Clinical Pregnancy Rate ² / ET	6/10 (60%)	7/9 (78%)	2/5 (40%)
Live Birth / ET	5/10 (50%)	4/9 (44%)	2/5 (50%)

Donor Egg Program 2006-2007		
Donor Egg	Fresh	Thawed
Transfers	13	6
+ Bhcg ¹ /ET	12/13 (92 %)	5/6 (83%)
Clinical Pregnancy Rate ² / ET	10/13 (77%)	4/6 (67%)
Live Births/ET	9/13 (69%)	2/6
Percentage pregnancies with twins	2/9 (22%)	1/2
Average # embryos transferred	2.08	2.17

1. +Bhcg denotes a positive blood pregnancy test per embryo transfer

2. Clinical Pregnancy rate denotes those where ultrasound imaging confirms a gestational sac in the uterus per embryo transfer

3. Cancellation rate denotes an ART cycle in which ovarian stimulation was carried out but was stopped before eggs were retrieved.

IMPORTANT INFORMATION WHEN COMPARING STATISTICS TO ASSESS A CLINIC

- **A comparison of clinic success rates may not be meaningful because patient medical characteristics and treatment approaches vary from clinic to clinic.** We encourage consumers considering ART to contact our clinic to discuss their specific medical situation and their potential for success using ART.
- **Some clinics see more than the average number of patients with difficult infertility problems.** Some clinics are willing to offer ART to most potential users, even those who have a low probability of success. Others discourage such patients or encourage them to use donor eggs, a practice that results in higher success rates among older women.
- **No reported success rate is absolute.** A clinic's success rates will vary from year to year, even if all determining factors remain the same.
- **Success rates are calculated per cycle rather than per patient.** Therefore, for patients who undergo both fresh and frozen cycles, success rates are calculated separately for each cycle. Clinics that have very good live birth rates with frozen embryos would have higher ART success rates if these births were included as successes from the original stimulated cycle. Consumers should look at both rates (for cycles using fresh embryos and for those using frozen embryos) when assessing a clinic's success rates.

For more information on interpreting success rates and ART in general, please visit the SART (Society for Assisted Reproductive Technology) website and view the [Patient's Guide to Assisted Reproductive Technology](#).
